8. ☒ Examiner's Statement of Reasons for Allowance

Reasons for Allowance

1. The following is an examiner's statement of reasons for allowance: The claims are allowable because prior art fails to teach that the first guide surface being at least substantially normal to the first and second shear faces; and the hole is positioned such that the blade can be attached to the casing with the second shear face facing inward and only the second section of the first shear edge positioned at the cutting zone, in combination with the remaining limitations set forth in claim 56.

Regarding claim 56, Repass (1,345,882) teaches a set of cutting blades 11, 18 for use in connection with a hand-held cutting tool includes a casing 6, 16 configured to carry the blade set. Repass also teaches that the cutting blade set includes a reciprocating cutting member 18 that pivots about a transverse axis of the casing; and a pair of fixed-cutting blades 11 attached to the casing in a spaced-apart relationship, wherein the reciprocating cutting member 18 is configured to reciprocate between the pair of fixed-cutting blades. Repass also teaches that each fixed-cutting blades 11 includes a body having a hole and spaced-apart first and second shear faces, the hole being configured to be located at the transverse axis of the reciprocating cutting member. Repass also teaches that the first shear edge having a first section forward of the hole and a second section different than the first section aft of the hole. It should be noted that the first shear edge has a section forward of the hole that receives the fastener 11 and a second aft of the hole. Repass also teaches a second shear edge at the junction of the first guide surface and the second shear face, the first and second shear edges being generally parallel to and spaced apart from one another by the thickness of the body. Repass also teaches that the hole is in the body extending between the first and second shear

faces, the hole being configured to interface with the casing 6, 16 such that the blade can be attached to the casing with a first shear face facing inward and only the first section of the first shear face facing inward and only the first section of the first shear edge positioned at a cutting zone for shearing a workpiece. See Figs. 1-4 in Repass.

However, Repass fails to teach that the first guide surface being at least substantially normal to the first and second shear faces; and the hole is positioned such that the blade can be attached to the casing with the second shear face facing inward and only the second section of the first shear edge positioned at the cutting zone, as set forth in claim 56. It should be noted that Repass does not positively disclose that the guide surface is substantially normal to the first and the second shear edges.

None of these references by themselves or in combination with the other prior art cited teach the claimed invention set forth in claim 56.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
